PARSNIP

Long Smooth Hollow Crown

Roots heavy at shoulder, gradually tapering from its hollow or depressed crown to a long thin point; skin creamy white, smooth and clean.

Parsnips will grow on any soil that is deep, mellow and rich. Fresh manure is apt to make roots coarse and ill-shaped. Sow in drills two feet apart, cover seed half an inch deep and press soil firmly. It is sometimes slow to germinate. Cultivate often, thin plants to 4 or 5 inches apart. Roots may be left in the ground over winter, but must be lifted in spring before commencing to grow.

One ounce will sow 200 feet of drill; 4 to 5 lbs. for an acre.
